

Complete Python Notes

Introduction to Python

Python is a simple and powerful programming language.

```
# Example of Introduction to Python
print("Learning Python")
```

Variables

Variables store data values.

```
# Example of Variables
print("Learning Python")
```

Data Types

Python supports int, float, string, list, tuple, dictionary, and more.

```
# Example of Data Types
print("Learning Python")
```

Conditional Statements

if, elif, else are used for decisions.

```
# Example of Conditional Statements
print("Learning Python")
```

Loops

for and while loops are used for repetition.

```
# Example of Loops
print("Learning Python")
```

Functions

Functions are reusable blocks of code.

```
# Example of Functions
print("Learning Python")
```

OOP

Python supports classes, objects, inheritance, and polymorphism.

```
# Example of OOP
print("Learning Python")
```

File Handling

Files can be read and written using open().

```
# Example of File Handling  
print("Learning Python")
```

Exception Handling

try and except handle errors.

```
# Example of Exception Handling  
print("Learning Python")
```
